press control + alt + T

once you are in the crosh shell here are some commands to use

help_advanced : it shows you a list of commands

ping WEBSITEIP : where it says WEBSITEIP put the ip of the website you want

tracepath : it will trace packets

packet_capture : capture packets! very usefull (developer mode needed)

===
how to find a wifi password:
shell
[enter]
sudo su
[enter]
cd /home/root/
[enter]
ls
[enter]
cd first huge number
[enter]
more shill/shill.profile

where it says "first huge number" there should be two huge lines of numbers and letters next to eachother choose the first one

===

how to get developer mode :

Open Chrome.
Click the Options button.
Click Settings.
Click "About Chrome OS."
Click "More info."
Click "Change channel."
Select Developer - unstable. Click Change channel. Chrome OS will now download the Developer Version updates.
Click Restart.
